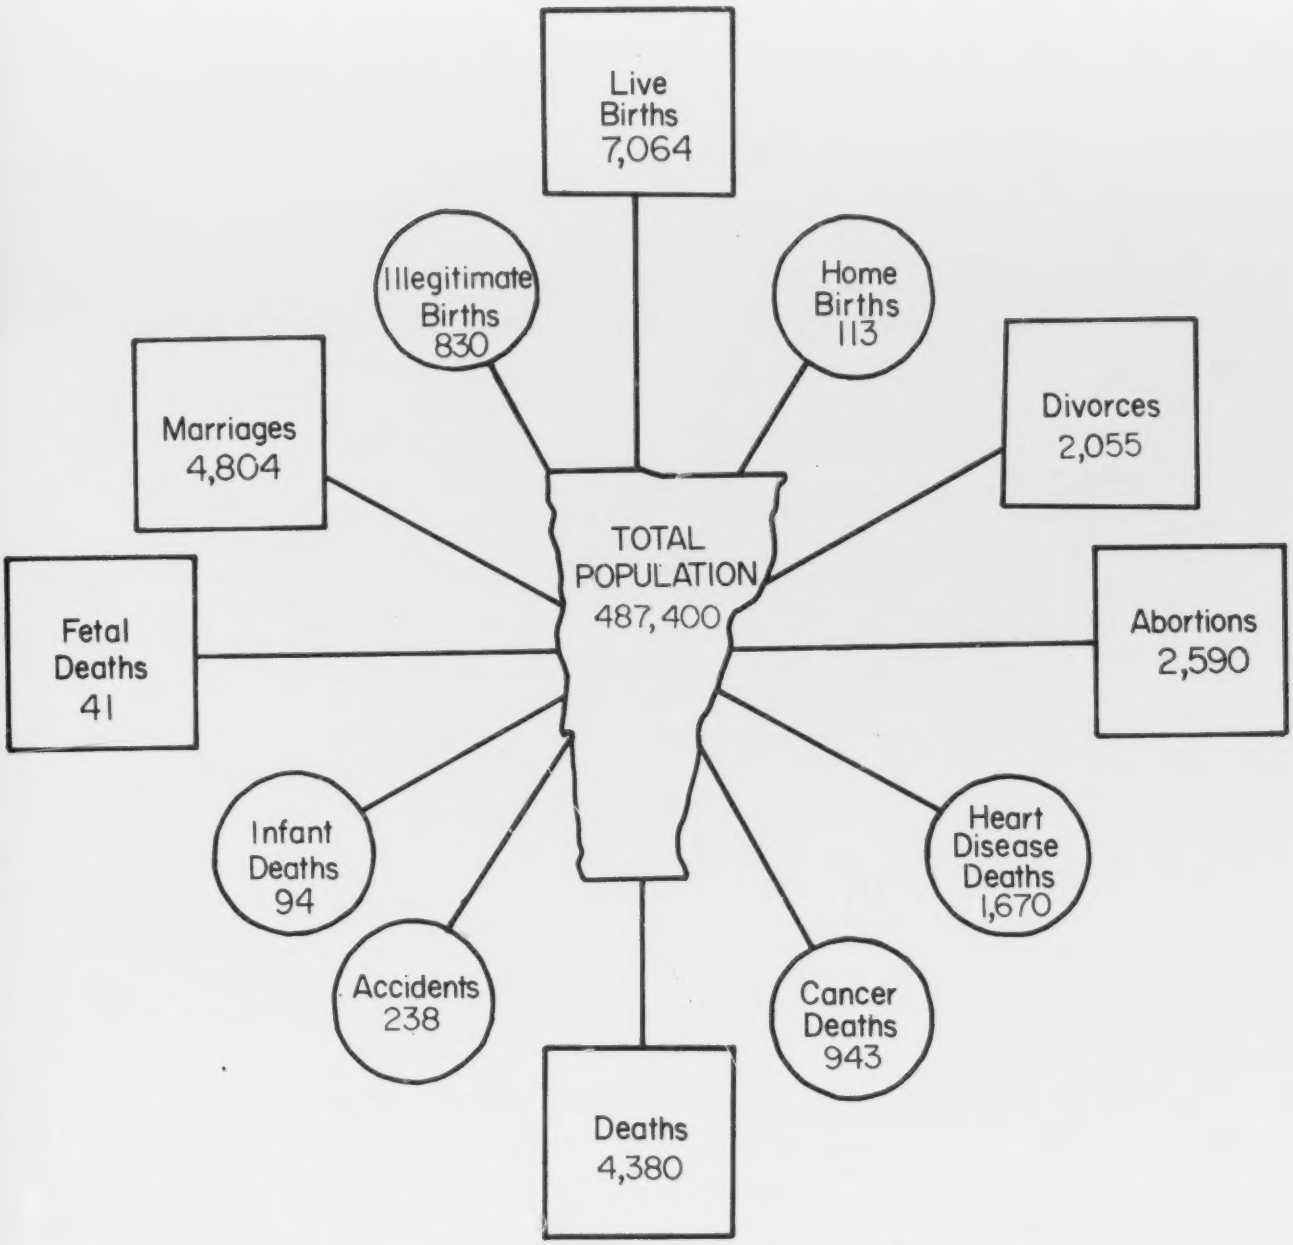
VERMONT VITAL EVENTS FOR 1978



Marriages, divorces and abortions are displayed above as occurrence data; all other vital events represent resident data.

INTRODUCTION

Title 18, section 5002 of the Vermont Statutes Annotated requires periodic publication of tables from the returns of births, deaths, fetal deaths, marriages, and divorces. This report, which is the ninety-fourth in a series of publications begun in 1857, presents Vermont vital events for the year 1978.

THE VERMONT VITAL STATISTICS SYSTEM

Births and deaths in Vermont are filed with the clerk in the town of occurrence on certificates designed and distributed by the Health Department's Division of Public Health Statistics. Marriages are filed with the clerk issuing the license (the town of residence of either the bride or groom or if neither are Vermont residents a town clerk in the county where the marriage takes place). Divorces are filed with the county clerk in the county where the decree is granted. Copies of these certificates are sent monthly to the Health Department for statistical processing and permanent filing.

Certificates of fetal death and induced termination of pregnancy are not legal documents in Vermont. These records are filled out by an attendant at the event and are sent directly to the Health Department. After processing, the certificates are temporarily filed and are periodically destroyed.

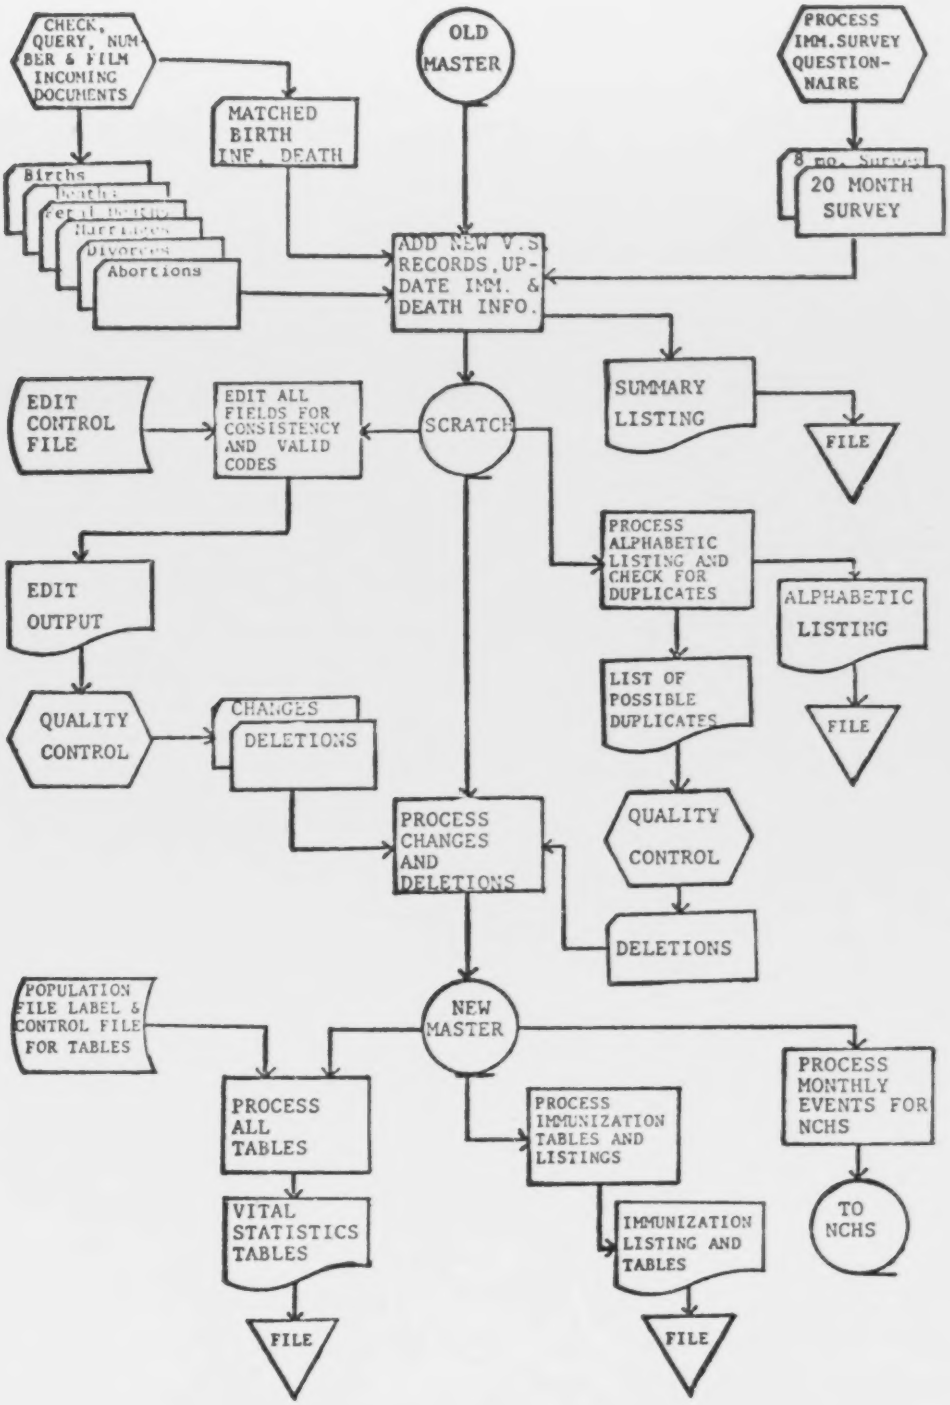
Copies of certificates pertaining to events which occurred to Vermonters outside the state are sent to the Health Department by the state in which the event occurred under the interstate exchange program for vital records. This program includes events affecting armed forces personnel stationed overseas. The Health Department is not typically informed of events occurring to the civilian population while out of the territorial United States and Canada.

Figure 2 charts the procedures of the Vermont Vital Statistics System. Upon receipt at the Health Department, the certificates are logged in by town, visually edited for completeness and internal consistencies and queried back to the source if omissions or inconsistencies are found. Since, under Vermont law, a certificate cannot be amended in the Health Department, if necessary the appropriate person will be asked to file an amended certificate. Medical and demographic data is coded and the certificate is numbered and microfilmed. Infant deaths are matched with the corresponding birth certificate. Certificates are then passed from the vital records section to data processing.

After the certificates are punched and verified, the month's vital events, including the matched births and deaths as well as the results of the Health Department's 8 and 20 month immunization status surveys, are loaded into the computer. The records are then

Figure 2

VERMONT VITAL STATISTICS AND IMMUNIZATION SYSTEM FLOWCHART



subjected to a computerized edit which checks all fields for valid codes and inconsistencies as well as flagging suspiciously large or small values and certain improbable conditions, such as unusual age-sex-cause of death combinations. Any discrepancies are reconciled and the records are added to the master tape. A copy of the months records is transmitted to the National Center for Health Statistics' national health data base. Monthly lists of vital events and immunization status reports are produced. When the annual data is complete, usually June of the following year, annual tabulations, including the ones found in this bulletin are produced.

HEALTH PLANNING DISTRICTS

We are continuing the practice, begun in 1976, of presenting several tables by the Health Planning Districts defined by the Vermont Health Systems Agency. These districts are displayed on the map on page iv.

POPULATION

All rates in this publication are based on estimates of the Vermont mid-year 1978 population. The county estimates were developed by the Division of Public Health Statistics in cooperation with the Bureau of the Census as part of the Federal-State Cooperative Population Estimation Program. The age-sex distribution was arrived at by interpolating between the estimated 1975 county age-sex distribution and the 1980 projections developed by the Vermont State Planning Office. Although the resulting estimates were not adjusted to the state and county provisional totals, they do not differ from them by more than 0.5%. The 1978 estimates are displayed in Table 2 (by county) and Table 3 (by Health Planning District).

Basic Definitions

The following definitions apply throughout this report:

A live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

A reportable fetal death is a death prior to the complete expulsion or extraction from its mother of a product of conception, having passed through at least the 20th week of gestation or weighing more than 400 grams; the fetus shows no signs of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

An abortion is an induced termination of pregnancy prior to the 20th week of gestation.

Weeks of gestation is the number of weeks elapsed between the first day of the last menstrual period and the date of delivery.

A neonatal death is a death occurring in the first 28 days of life.

An infant death is a death occurring in the first year of life.

A perinatal death is a fetal death or a death occurring in the first week of life.

Live birth order is the number of previous live births plus the current birth.

Plurality is the number of siblings born as a result of this pregnancy.

Residence. Usual place of residence for person to whom event occurred. For births and fetal deaths residence is defined as the mother's usual place of residence.

Occurrence. Place where the event actually occurred.

RATES

Crude Birth Rate = $\frac{\text{No. of resident live births}}{\text{Total resident population (mid-year)}} \times 1{,}000$

Age-specific Birth Rate = $\frac{\text{No. of resident live births for a specific age of mother}}{\text{Total female population of specific age (mid-year)}} \times 1{,}000$

Fertility Rate = $\frac{\text{No. of resident live births}}{\text{Total resident female population (15-44)}} \times 1{,}000$

Crude Death Rate = $\frac{\text{No. of resident deaths}}{\text{Total resident population (mid-year)}} \times 1{,}000$

Age-specific Death Rate = $\frac{\text{No. of deaths in specific age group}}{\text{Total resident population in specific age group}} \times 100{,}000$

Marriage Rate = $\frac{\text{No. of persons married}}{\text{Total resident population (mid-year)}} \times 1{,}000$

Divorce Rate = $\frac{\text{No. of persons (divorces \& annulments)}}{\text{Total resident population (mid-year)}} \times 1{,}000$

Infant Death Rate = $\frac{\text{No. of infant deaths}}{\text{Total resident live births}} \times 1{,}000$

Neonatal Death Rate = $\frac{\text{No. of neonatal deaths}}{\text{Total resident live births}} \times 1{,}000$

Fetal Death Rate = $\frac{\text{No. or resident fetal deaths}}{\text{Total resident live births and resident fetal deaths}} \times 1{,}000$

Perinatal Death Rate = $\frac{\text{No. of perinatal deaths}}{\text{Total resident live births and resident fetal deaths}} \times 1{,}000$

Abortion Ratio = $\frac{\text{No. of resident abortions}}{\text{Total resident live births}} \times 1{,}000$

Age adjusted rates:

Age adjusting allows one to compare rates among populations having different age distributions by adjusting the crude rates in each population to a standard population base. (In this bulletin, county rates are adjusted to the state population distribution.) The computation formula is:

$$\text{The sum of } \left(\frac{\text{Age specific rate for each age group} \times \text{standard population in that age group}}{\text{Total standard population}} \right) \times 1{,}000$$

SUMMARY STATISTICS

Summary of 1978 Vital Events

	Occurrence Number	Residence Number	Rate
Births	7,587	7,064	14.5/1000 population
Deaths	4,864	4,380	9.0/1000 population
Natural Increase		2,684	5.5/1000 population
Infant Deaths	94	94	13.3/1000 live births
Fetal Deaths	49	41	5.8/1000 live births & fetal deaths
Abortions	2,590	2,018*	285.7/1000 live births
Marriages	4,804		9.9/1000 population**
Divorces	2,055		4.2/1000 population**

Estimates mid-year population = 487,400

*Does not include out of state occurrences

**Based on number of occurrences

SUMMARY STATISTICS

The table on the opposite page presents a summary of Vermont's 1978 vital events.

For the second consecutive year, the live birth rate rose minimally, from 14.4 live births in 1977 to 14.5 in 1978. This increment is the result of an increase in the number of women of childbearing age rather than a positive change in childbearing patterns as evidenced by the decline in the fertility rate from 65.6 live births per 1000 women aged 15-44 in 1977 to 63.8 in 1978.

The crude death rate rose to 9.0 deaths per 1000 population, a five percent increment over the 1977 rate of 8.6 and the first increase in this statistic since 1973. The reason for this change is not clear.

Fetal and perinatal deaths declined; the 1978 fetal death rate of 5.8 deaths per 1000 live births and fetal deaths is the lowest on record, 34 percent lower than the 1978 rate of 8.8 and 15 percent lower than the previous low rate of 6.8 in 1976. The perinatal death rate of 12.2 deaths per 1000 live births and fetal deaths represents an 18 percent decline from the 1977 rate of 14.8. However, these decreases were offset by increases in the neonatal and infant death rates. There was a 26 percent increase in the neonatal death rate from 7.0 deaths per 1000 live births in 1977 to 8.8 in 1978 and the infant death rate rose by 30 percent from 10.2 deaths per 1000 live births in 1977 to 13.3 in 1978. These fluctuations are the reverse of those that occurred in 1976-77 when the fetal and perinatal rates increased and the neonatal and infant rates declined.

The resident abortion ratio of 285.7 abortions per 1000 live births is the highest ever recorded in the state. This represents a 32 percent increase over the 1977 ratio of 216.6 and a 17 percent increase over the previous high ratio of 243.6 abortions per 1000 live births which occurred in 1976.

The 1978 marriage rate was identical to the 1977 rate of 9.9 marriages per 1000 population. The 1978 divorce rate of 4.2 divorces per 1000 population was down 5 percent from the 1977 rate of 4.4.

[1]Rate per 1,000 population

[2]Rate per 1,000 live births

[3]Rate per 1,000 live births and fetal deaths

[4]Rate per 10,000 live births

*The majority laws were changed, effective July 1, 1971, so that all 18 year old residents could marry without parental consent.

#Reporting requirements were changed and includes only those of 20^{+} weeks gestation.

**Data for these years is based on occurrence returns only. 1857 was the first year that town clerks were required to report vital events to the Secretary of State and returns for that year are incomplete.

*SPELLINGS MAY VARY

BIRTHS

There were 7,064 live births to Vermont residents in 1978 resulting in a rate of 14.5 live births per 1000 population. As Figure 4 shows, Vermont's birth experience has closely mirrored that of the United States white population for the past thirty years. The fertility rate was 63.8 live births per 1000 women aged 15-44 years.

Most Vermont babies (77%) were either first or second children. The median age of mother was 25 years; over 80 percent were high school graduates. There were 72 sets of twins and one set of triplets born in 1978.

The number of home deliveries, which has increased dramatically since 1973, has apparently stabilized as shown in Figure 5 (page 40). One hundred thirteen babies (1.6%) were born at home in 1978.

Low birthweight* is an indicator of potential high risk for medical complications. Figure 6 (page 46) displays the relationship between low birthweight and age of mother; 6.2 percent of 1978 births were low birthweight.

*A birthweight of less than 2500 grams, or 5.5 pounds.

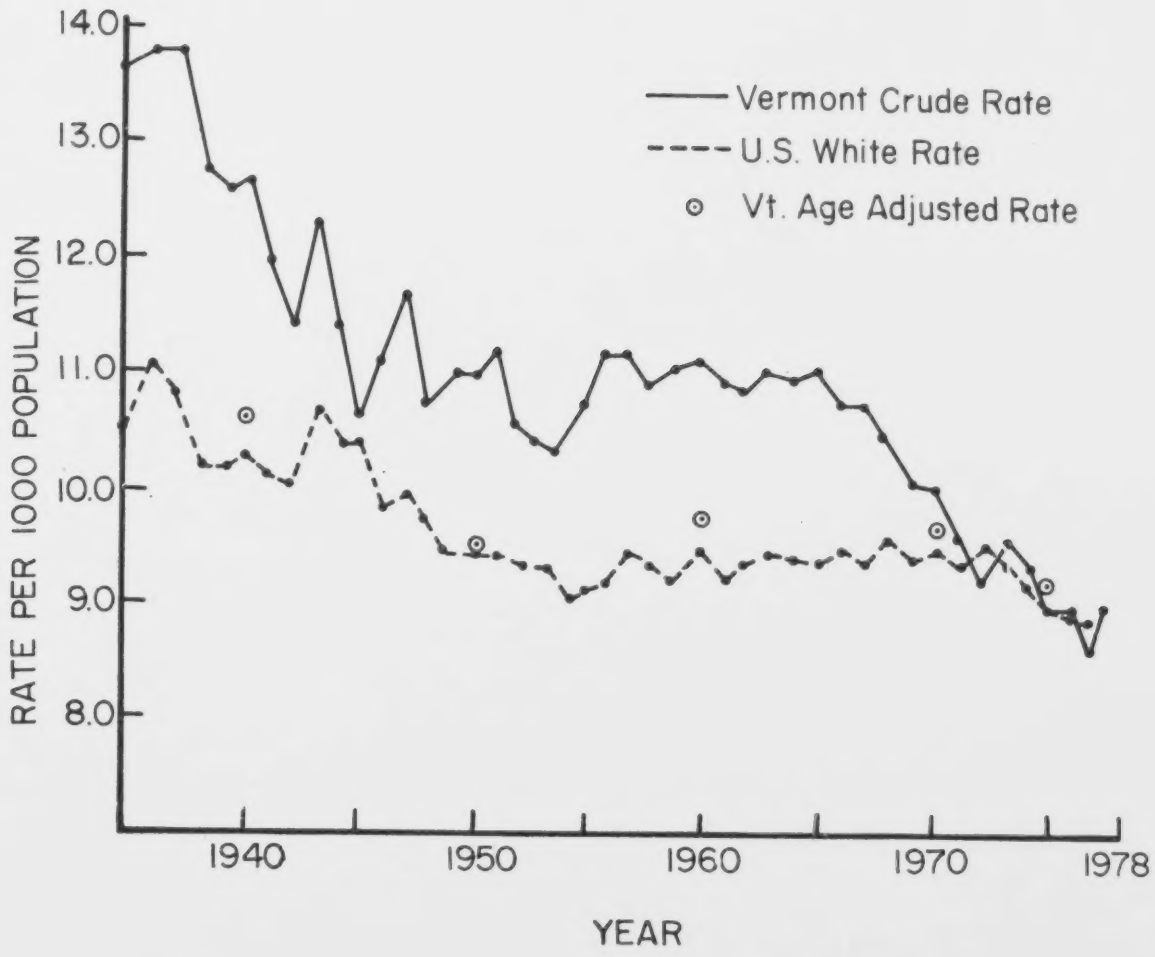
DEATHS

figure 7

Vermont and U.S. White Crude Death Rates 1935-1978



United States data for 1978 not available at time of publication.

DEATHS

Four thousand three hundred and eighty (4,380) Vermont residents died in 1978 resulting in a death rate of 9.0 deaths per 1000 population. The relationship between the Vermont rate and the U.S. white rate is shown in Figure 7. There has been a substantial difference between the Vermont crude death rate and the rate for the U.S. white population in the past. This difference has been due, in large part, to differences in age structure between the two populations. Thus, as the figure indicates, the Vermont age-adjusted rates have been comparable to the U.S. white rates over time. The rapid decline in the Vermont crude rate since 1965 is, in part, a function of the changing age structure of the Vermont population.

Figure 8 displays the 10 leading causes of death in 1978 by percent of death and Table 25 displays the sex-specific death rates from these causes since 1952. Although the cause-specific rates have changed over time, there has been no change in the relative ranking of the first five causes in the past twenty-five years. Heart disease, cancer, cerebrovascular disease, and accidents accounted for over 75 percent of all 1978 deaths.

*Cause of death is coded by the International Classification of Diseases, Adapted (ICDA). Deaths in 1952-57 were coded according to the 6th ICDA revision (ICDA-6); 1958-67 deaths according to ICDA-7; and 1968-78 deaths according to ICDA-8. Although there is little difference between ICDA-6 and ICDA-7, significant changes were made in ICDA-8. Therefore, code numbers for both ICDA-7 and -8 are given in addition to comparability ratios which have been applied to the 1952-67 rates to make them comparable to the 1968-78 rates. (Ratios from "Monthly Vital Statistics Report", Volume 17, #8 supplement, October 25, 1968; DHEW, NCHS, Washington, D.C.).

Table 26

Leading Causes of Death by Age Groups and Sex

Rates per 100,000 Population

Vermont 1978

Age Group and Cause	Total	Male	Female
Under 1 Year* (Total Deaths = 94)	13.3	16.0	10.6
Certain Causes in Early Infancy	5.5	5.9	5.2
Congenital Anomalies	4.0	5.6	2.3
Symptoms & Ill-defined Conditions	2.1	3.1	1.1
1-4 Years (Total Deaths = 15)	49.4	44.6	54.4
Other Accidents	19.7	6.4	34.0
Congenital Anomalies	9.9	19.1	0.0
5-14 Years (Total Deaths = 23)	26.9	25.2	28.8
Motor Vehicle Accidents	8.2	11.5	4.8
Other Accidents	8.2	4.6	12.0
15-24 Years (Total Deaths = 120)	120.0	185.7	54.1
Motor Vehicle Accidents	55.0	89.8	20.0
Other Accidents	27.0	43.9	10.0
Suicide	18.0	26.0	10.0
25-44 Years (Total Deaths = 168)	138.5	183.4	94.0
Malignant Neoplasms	27.4	23.3	31.3
Heart Disease	23.2	36.7	9.9
Motor Vehicle Accidents	21,6	38.3	4.9
Suicide	18.2	31.7	4.9
Other Accidents	12.4	23.3	1.6
45-64 (Total Deaths = 819)	924.7	1220.4	651.9
Heart Disease	318.8	492.4	158.6
Malignant Neoplasms	301.8	351.0	256.4
Cerebrovascular Disease	35.0	26.6	45.6
Cirrhosis of the Liver	31.7	44.8	19.6
Chronic Obstructive Lung Disease	30.5	42.4	19.6

*Rates per 1,000 live births

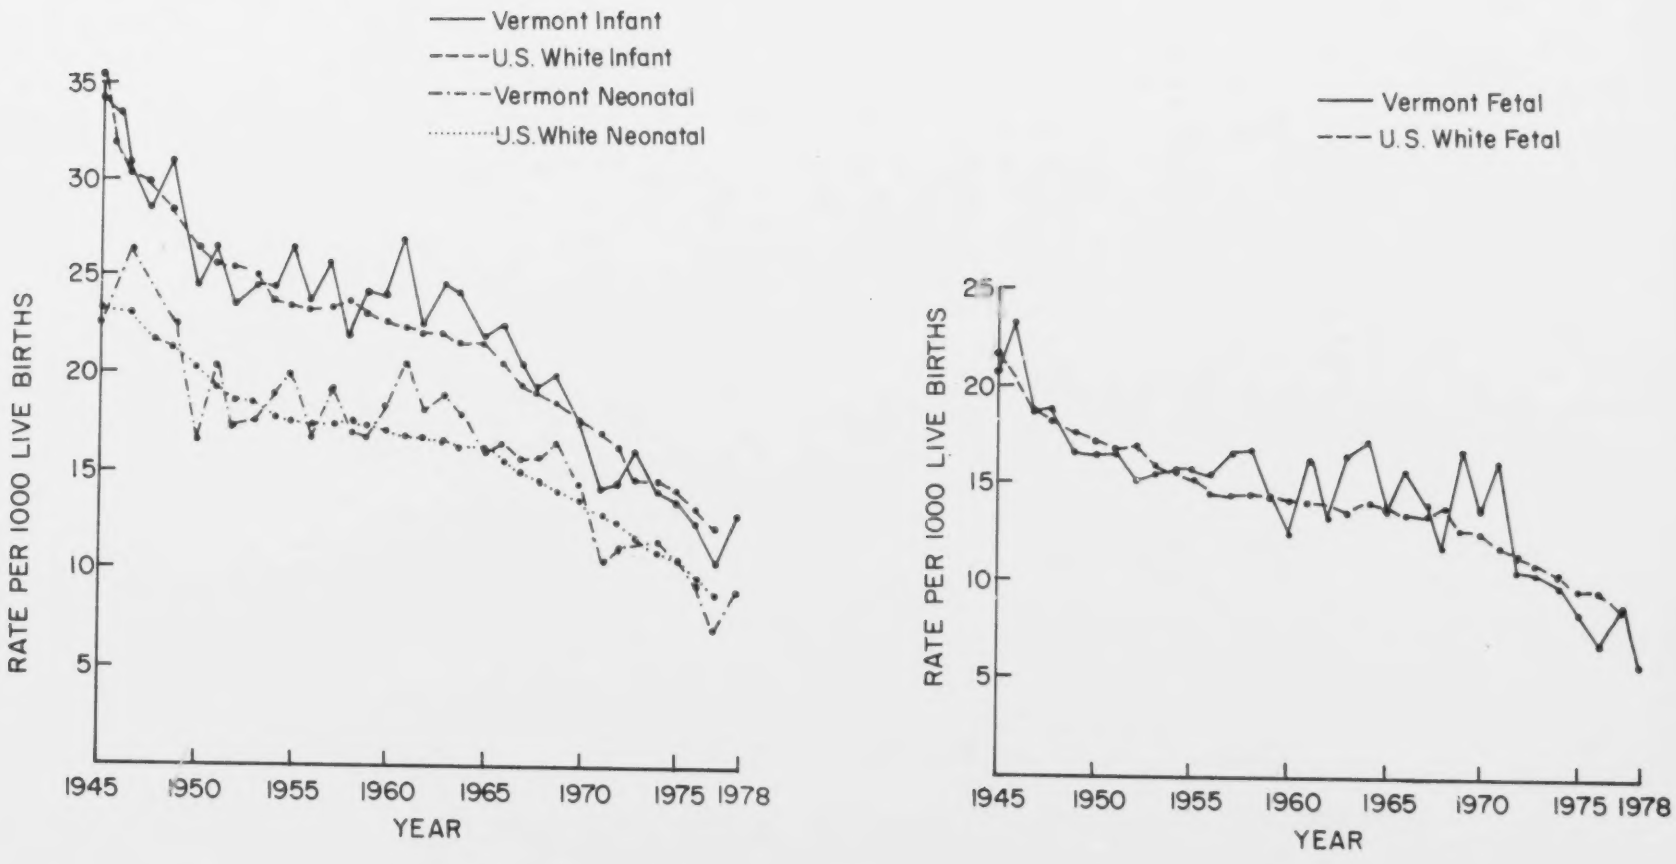
INFANT DEATHS, FETAL DEATHS, ABORTIONS

figure 9

Vermont and U.S. White Infant and Neonatal Mortality Rates and Fetal Mortality Ratios 1945-1978



United States data for 1978 not available at time of publication.

INFANT DEATHS, FETAL DEATHS & ABORTIONS

There were 62 Vermont resident neonatal deaths and 94 resident infant deaths in 1978. The resulting rates were 8.8 neonatal and 13.3 infant deaths per 1000 live births. As Figure 9 indicates, these rates have been comparable to the U.S. white statistics over time.

The 41 fetal deaths represent the lowest fetal death rate ever recorded in the state (5.8 deaths per 1000 live births and fetal deaths). This rate, which exhibits much variability, has fluctuated around the U.S. white rate for the past 20 years.

The 2,018 abortions performed in the state on Vermont residents results in the highest abortion ratio ever recorded (285.7 abortions per 1000 live births). Figure 10 displays the relationship between the state abortion ratio and the United States white ratio. Twenty-two percent of all reported pregnancies were terminated by abortion in 1978.

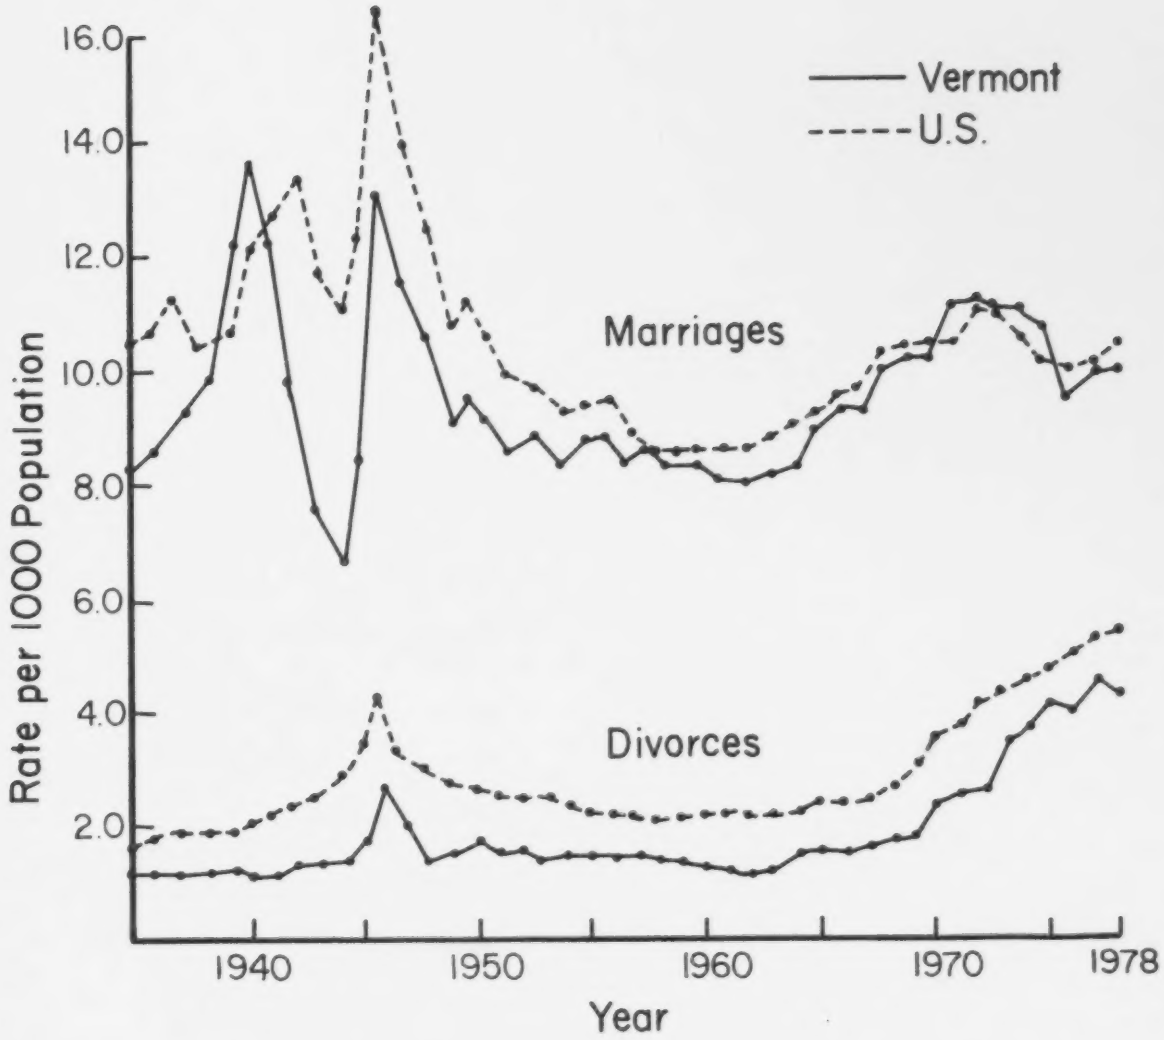
MARRIAGES AND DIVORCES

figure II

Marriage and Divorce Rates
Vermont and U.S; 1935-1978



United States Data for 1978 is Provisional

MARRIAGES AND DIVORCES

Marriages

There were 4,804 marriages in Vermont in 1978. The resulting rate of 9.9 marriages per 1000 population is 4 percent lower than the provisional United States rate of 10.3. As Figure 11 shows, the Vermont rate has followed the national trend for the past twenty years.

Although most marriages were first marriages for both parties (71 percent of brides and 69 percent of grooms were married for the first time) these percents have been declining over the past ten years. As Figure 12 indicates, in 1967, 84 percent of brides and 83 percent of grooms were married for the first time.

The median age of brides in 1978 was 23 years while the average groom was 25 years old. There were seventeen brides and eight grooms who were 70 or older. Summer was again the most popular time of year to marry; 13 percent of all marriages occurred in August, 12.9 percent in July and 12.8 percent in June. January was the least popular popular marriage month, accounting for only 4 percent of the year's marriages. As in previous years, over two thirds (68%) of the marriage ceremonies performed in the state were religious.

Divorces

There were 2,055 divorces granted in 1978, including 3 annulments. The divorce rate of 4.2 divorces per 1000 population is 19 percent below the provisional United States rate of 5.2. The Vermont divorce rate has been consistently lower than the U.S. rate for the past forty years.

The average divorce terminated a marriage that had lasted at least six years; 13 percent of divorces were granted to couples who had been married twenty years or more. The median age of divorcing wives was thirty years; husbands had a median age of thirty-two years. Almost two-thirds (61%) of Vermont divorces involved minor children. Most divorces terminated a first marriage. This was true for 84 percent of wives and 82 percent of husbands. Grounds for divorce was almost always (98%) living apart for six consecutive months.

APPENDIX

DEFINITIONS OF THE 46 SELECTED CAUSES OF DEATH

	8th ICDA	TABLE LABEL	DESCRIPTION
1.	010-012	RESPIRATORY TB	Silico-, pulmonary, and other respiratory tuberculosis.
2.	013-019	OTHER TB	Other tuberculosis.
3.	090-097	VENEREAL DISEASES	Venereal diseases.
4.	000-136	OTHER INFECT/PARAS	Other infective and parasitic diseases, except TB and VD identified above.
5.	150-159	DIGESTIVE CANCER	Malignant neoplasm of digestive organs and peritoneum.
6.	160-163	RESPIRATORY CANCER	Malignant neoplasm of respiratory system.
7.	174	BREAST CANCER	Malignant neoplasm of breast.
8.	180-187	GENITAL CANCER	Malignant neoplasm of genital organs.
9.	188, 189	BLADDER CANCER	Malignant neoplasm of bladder and other urinary organs.
10.	204-207	LEUKEMIA	Leukemia: lymphatic, myeloid, monocytic, other and unspecified.
11.	200-203+	OTHER LYMPHATIC CA	200-203 plus 208-209 Other neoplasm of lymphatic and hematopoietic tissue.
12.	140-209*	OTHER CANCER	Other malignant neoplasms; i.e., 140-149, 170-173, 190-199.
	TOTAL CANCER = sum of groups 5-12 above; i.e., all 140-209 inclusive.		
13.	250	DIABETES MELLITUS	Diabetes mellitus.
14.	320	MENINGITIS	Meningitis.
15.	390-398	RHEUMATIC FEVER	Active rheumatic fever and chronic rheumatic heart disease.
16.	402, 404	HYPERTENSIVE HRT D	Hypertensive heart disease (402) and hypertensive heart and renal disease (404).
17.	410-413	ISCHEMIC HEART DIS	Ischemic heart disease, including M.I. and angina pectoris.
18.	420-429	OTHER HEART DISEAS	Other forms of heart disease.
	TOTAL HEART = sum of groups 15-18 above.		
19.	400-401+	HYPERTENSION	400-401 plus 403 Hypertension.
20.	430-438	STROKE	Stroke, or cerebrovascular disease.
21.	440	ARTERIOSCLEROSIS	Arteriosclerosis
22.	441-448	DIS. OF ARTERIES	Disease of arteries, arterioles and capillaries.
	MAJOR CARDIOVASCULAR DISEASES = sum of groups 15-22 above, i.e., whole 390-448, which includes heart, stroke and other causes.		
23.	466	ACUTE BRONCHITIS	Acute bronchitis and bronchiolitis.
24.	470-474	INFLUENZA	Influenza.
25.	480-486	PNEUMONIA	Pneumonia.
26.	490-491	CHRONIC BRONCHITIS	Bronchitis, unqualified and chronic.
27.	492	EMPHYSEMA	Emphysema.
28.	493	ASTHMA	Asthma.
29.	515-517	PNEUMOCONIOSIS	Pneumoconiosis and other chronic interstitial pneumonia.
30.	460-519	OTHER RESPIRATORY	Other respiratory, i.e., all other 460-519 not identified above, so that groups 23-30 = Total Respiratory, except Respiratory TB and Cancer.
	TOTAL RESPIRATORY, including TB and Cancer = groups 23-30 above, plus 1 and 6.		
31.	531-533	PEPTIC ULCER	Peptic ulcer.
32.	550-553+	HERNIA/INTEST OBS	550-553 plus 560 Hernia and intestinal obstruction.

	8th ICDA	TABLE LABEL	DESCRIPTION
33.	571	CIRRHOSIS OF LIVER	Cirrhosis of liver.
34.	574, 575	CHOLELITHIASIS	Cholelithiasis, cholecystitis and cholangitis.
35.	580-584	NEPHRITIS/NEPHROSI	Nephritis and nephrosis.
36.	590	KIDNEY INFECTION	Infections of kidney.
37.	600	HYPERPLA. PROSTATE	Hyperplasia of prostate.
38.	740-759	CONGENITAL ANOMAL	Congenital anomalies.
39.	760-778	EARLY INFANCY	Certain causes of mortality in early infancy.
40.	780-796	SYMPTOMS/ILL DEF	Symptoms and ill-defined conditions.

THE EXTERNAL CAUSE GROUP, E800-E999 (assume an E before each number).

41.	810-823	M.V.ACCIDENTS	Motor vehicle accidents.
42.	800-949+	OTHER ACCIDENTS	800-807 plus 825-949 Other accidents.
43.	950-959	SUICIDE	Suicide.
44.	960-978	HOMICIDE	Homicide and legal intervention.
45.	980-999	OTHER EXTERNAL	Other external = undetermined whether accident or suicide, and, warfare.
46.	RESIDUAL	ALL OTHER	All other causes, but since all external causes are included in groups 41-45, this group, 46, includes really all other causes 0-796, not identified in groups 1-40.
